Service de Cardiologie du CHUV

Dyspnea

Umbrella term for a number of distinguishable subjective experiences including effortful respiration, a feeling of choking or asphyxiation, and hunger for air.

- Affecting as many as **25%** of patients seen in the ambulatory setting
- Up to **50%** of patients admitted to acute, tertiary care hospital

Heart

- acute coronary syndrome/myocardial infarction
- acutely decompensated congestive heart failure
- pulmonary edema
- high-output failure
- cardiomyopathy
- (tachy-)arrhythmia
- valvular heart disease
- pericardial tamponade
- arrhythmia
- constrictive pericarditis
- pericardial effusion
- coronary heart disease
- physical deconditioning
- congestive heart failure (HFrEF, HFP EF)
- intracardiac shunt
- restrictive cardiomyopathy
- valvular heart disease
- pulmonary hypertension
- chronotropic incompetence

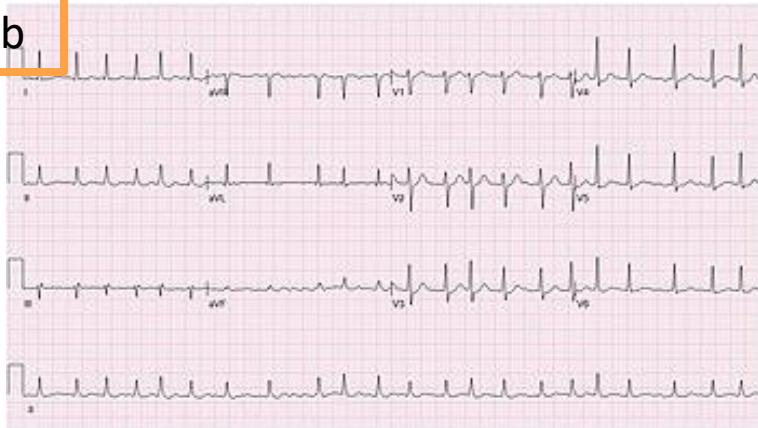

Workup

- Laboratory tests
 - Anemia? Thyroid function? D-dimers? **NT-proBNP?** **Troponins?**
- **ECG**
 - Signs of ischemia? Bradyarrhythmias? Tachyarrhythmias? **FA?** Ectopic beats? Signs of amyloidosis?
- Xray
 - Lung parenchyma? Cardiomegaly?
- **Echocardiography**

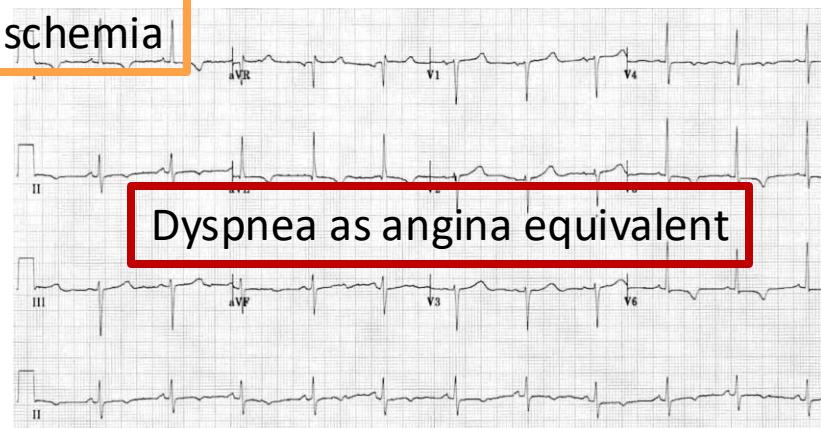

- **6-minute walking test**
- Cardiac MRI/PET-CT/coronary angiography
- **CPET**

Chronotropic Incompetence

- Dyspnea felt as exercise intolerance
- Independent predictor of major adverse cardiovascular events and overall mortality
- Failure to obtain $\geq 80\%$ of the HR reserve, obtained during a graded exercise test, as the primary criteria for CI.

Pulmonary Hypertension
